

The WHIS®top is a lightweight aluminum diffractor that can be mounted onto any (existing) noise barrier to deflect sound upwards. The WHIS®top adds a 4 to 5 dB noise reduction, comparable to adding an extra 2 meters to barrier.

## Noise reduction (dB)

reducing traffic noise

Life span > 50 years The WHIS® wall has a life span of more than 50 years.

Easy to install With the WHIS®top, any new noise barrier can be lowered by 2 meters. That means lower noise barriers and lighter constructions.

# Cost effective Building lower i

Building lower makes you more cos-effective, with fewer materials, a lighter construction and reduced wind loads

# Increasing reduction in existing situations

The WHIS®top improves reduction from existing noise barriers without radical measures.

#### Little maintenance

Only once every two years maintenance is recommended

### Lower construction

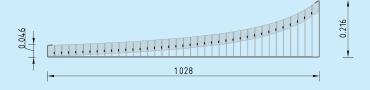

With the WHIS®top every noise barrier's height can be reduced with 2 meters.

## **Technical specifications**

- No standard dimensions, detailed engineering needed to fit on any type of noise barrier.
- Height: 0.20 meter
- Reduction: 4 to 5dB•
- Weight ca. 40 100kg / meter
- Combine with concrete barrier for crash protection

### Installation and maintainance

- Cab be mounted onto any other type of existing noise barrier
- The connection between between the barrier and the WHIS®top will be custom made, to ensure a perfect fit.
- No changes to existing noise barrier required

## Where can you apply the WHIS®top?

Link roads

Distributor roads

**80** Provincial roads

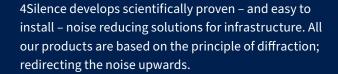

Railways

Circular roads

Highways

It makes noise reduction more elegant, durable, and (cost-) effective, helping more people enjoy peace and quiet in their environment.
